Performance you can rely on.

Western Canadian Owned and Operated

35 years in business in Western Canada. Local ownership with an understanding of market needs and customer requirements. This “Pride in Ownership” resonates through each of our branches.

Single Source Power

We are the exclusive source for Kohler Power Systems with products ranging from 2 kW to 4 MW and transfer switches to 4000 amps. With many years of experience with emergency power products, our customers are supported by a dedicated sales and engineering staff in every branch.

Customized Power

With Kohler Power we have the unique ability to provide the best package for the application. Not limited to one engine supplier allows us to deliver a generator with the best load response for the application. Whether it's a simple gasoline, propane, natural gas or diesel generator set or a complete combined cycle package, we have the products for your cabin, small business or large facility.

Design—Get it Right!

Kohler Power Systems provides engineers, architects and end users the most advanced web-based sizing tool on the market today. Constant updates to motors, HVAC systems, and other components and systems can create undue stress on anyone trying to install a standby power system. Our sizing software is constantly being modified to account for these changes. Our sales and engineering staff can also assist with sizing and all applicable codes in your area.

Product Support

We have a genuine concern for our customers and the operation of the products we sell. To support our customers we offer:

- Factory trained technicians.
- Customer support plans in partnership with end user.
- Parts inventory throughout Western Canada and online parts to shop 24/7 and on your time.
- A branch and dealer service support network.

Planned Maintenance Programs

The investment in emergency power can be substantial. Make sure your standby power system is in top shape, ready to start when required. With the help of the latest CSA C282 guidelines, we provide the services required to increase your reliability and meet all regulations. We provide planned maintenance programs on all types of equipment regardless of where the package was purchased or where the site is located.
